CS23333-Object Oriented Programming Using Java-2023

```
Create a Bank Account object (A/c No. BA1234) with initial balance of $500:
Deposit $1000 into account BA1234:
 New balance after depositing $1000: $1500.0
Withdraw $600 from account BA1234:
New balance after withdrawing $600: $900.0
Create a SavingsAccount object (A/c No. SA1000) with initial balance of $300:
Try to withdraw $250 from SA1000!
Minimum balance of $100 required!
Balance after trying to withdraw $250: $300.0
Answer: (penalty regime: 0 %)
 Reset answer
 1 - class BankAccount {
                Private field to store the account number
             private String accountNumber;
             // Private field to store the balance

Question **3**Correct Marked out of

5.00 Flag question

create a class called College with attribute String name, constructor to initialize the name attribute, a method called Admitted(). Create a subclass called CSE that extends Student class, with department attribute, Course() method to sub class. Print the details of the Student.

College:

String collegeName;

@Override

51

public College() { }

public admitted() { }

Student:

String studentName;

String department;

public Student(String collegeName, String studentName,String depart) { }

public toString()

Expected Output:

```
A student admitted in REC
CollegeName: REC
Student Name: Venkatesh\\
Department : CSE
For example:
 Result
 A student admitted in REC
 CollegeName : REC
StudentName : Venkatesh
Department : CSE
Answer: (penalty regime: 0 %)
